

These are very informal minutes which are mainly meant to have a trace of the meeting.

The talks from this DESIR meeting are on the DESIR web page at www.cenbg.in2p3.fr/desir under "collaboration" and "DESIR related talks".

To remind all of you:

- I expect the final version of your contribution to the DESIR technical report basically by the end of this week or for the very beginning of next week.
- Maria will write the introduction to the BESTIOL part and, (correct?) the general purpose part.
- Pierre and Dave will write the "Planning" part, which should cover also what is called "commissioning" which I will delete as a independent topic...
- Gerda will write the interface part for S3
- Jean-Charles for the Safety
- Stephane for the physics case
- Etienne for the LPCtrap chapter
- François, Paul and Gerda for the LUMIERE part
- Daniel for the neutron spectroscopy part
- Hans for the MOT
- Bertram for running costs, manpower, finances and what else is missing.

Please keep in mind that the dead line in december 19.

François will contact the people at IPNO who will hopefully calculate beam lines for us. Pierre will quickly get a number for electrostatic beam line costs per meter from ISOLDE.

We plan to organise a general DESIR collaboration meeting during the SPIRA2 week from January 26-29, most likely on tuesday morning 27 and a joint meeting with S3 in late afternoon.

There will be a presentation of the DESIR technical report during the open SAC meeting on thursday 29. Dave volunteered for that.... He will count on all of you to feed him with transparencies.
