

Simple light curve estimates

Simple daily light curves (similar as Jim's) were produced by:

- integrating the counts over a 2x2 deg.2 area
- correcting for the energy dependent exposure
(6 bins betw. 100 MeV and 100 GeV)
- correcting for Galactic Diffuse Background (GALPROP)
- correcting for Extragalactic Diffuse Background
(60% greater than EGRET's)

http://www.cenbg.in2p3.fr/ftp/astropart/glast/DC2/light_curves/non_variable

The flux unit is
close to $\text{ph cm}^{-2} \text{s}^{-1}$
($E > 100 \text{ MeV}$)

This page is still under development.

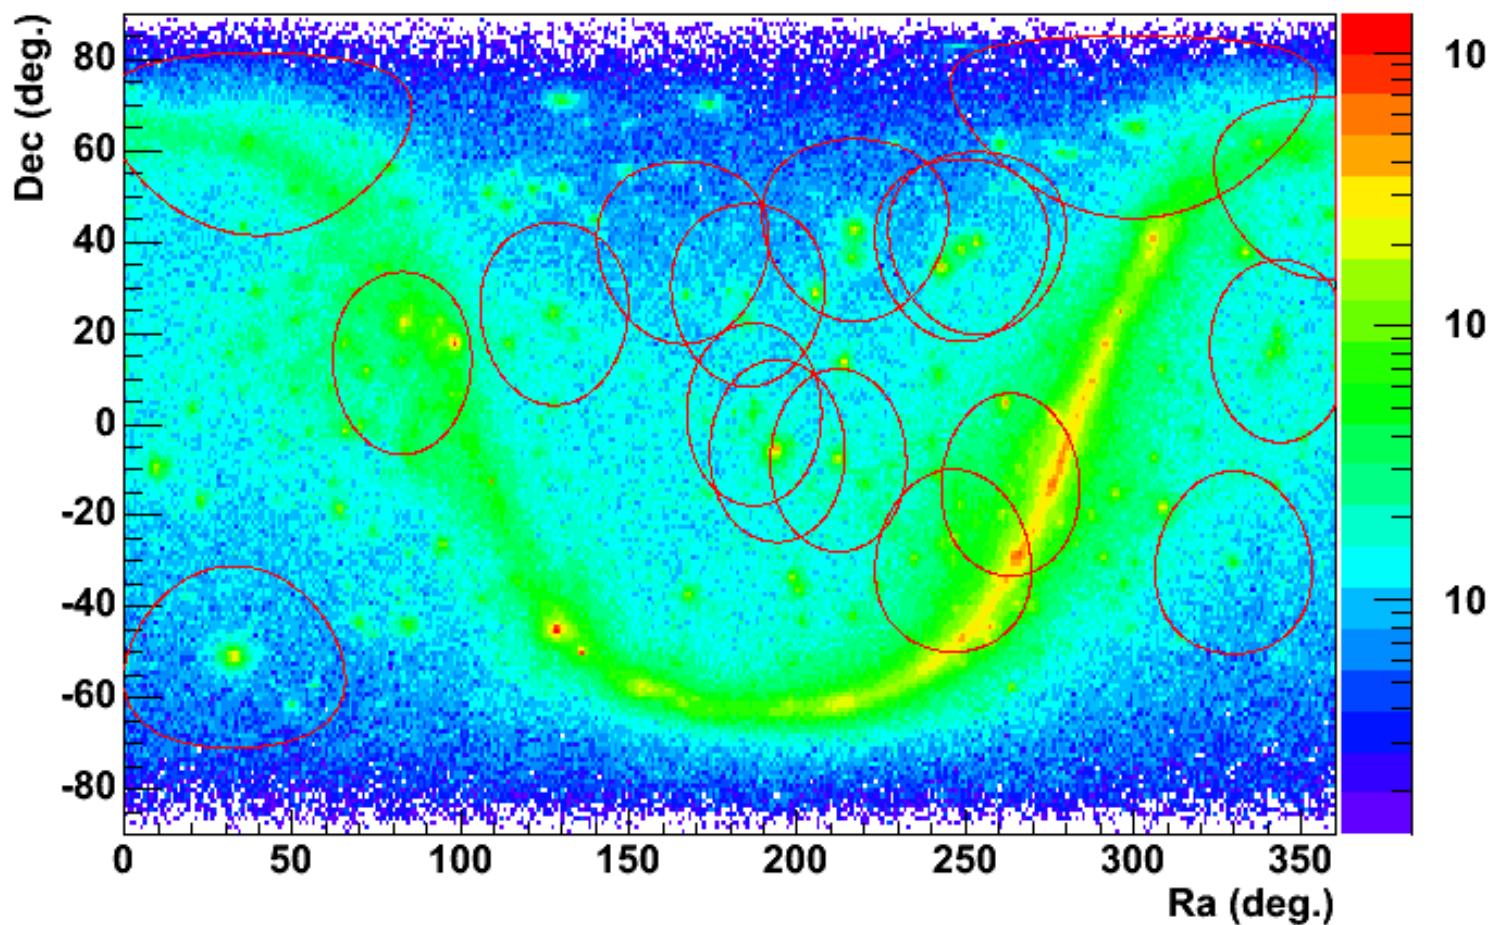

Preliminary daily light curves were obtained with likelihood (some points are still missing). All catalog sources within a 20 deg. radius were considered in the model.

To do: run MINUIT with a limited number of “free” sources to get the error bars right.
