

GLAST LAT Collaboration Guidelines for Multiwavelength Proposals and Data

The principal goal of these guidelines is to maximize the scientific return from GLAST and the LAT and from the analysis done by the LAT Collaboration. That goal will be achieved by the LAT team making the greatest possible effort to be inclusive of MW efforts.

Guideline One – Collaboration Multiwavelength proposals should originate with the science groups

Guideline Two – Multiwavelength proposals are distinct from scientific papers

Guideline Three – Multiwavelength proposals by LAT collaboration members are LAT team proposals in most cases

Guideline Four – Authorship of multiwavelength proposals should take into consideration differing needs

Guideline Five - Multiwavelength collaborations should always be done on a nonexclusive basis.
